

The Braille Metamorphosis Has Begun!

Meet the Monarch, a dynamic tactile device that is capable of rendering multiple lines of braille and tactile graphics on the same surface. Developed by APH and HumanWare, in partnership with NFB, the Monarch features 10 lines of 32 refreshable braille characters, in addition to a tactile array that displays images, such as charts, maps or graphs. Stop by the APH booth to get hands on with this revolutionary braille device as well as many other great products.
